All relevant state-of-the-art concepts have been carefully implemented.

RipEX, 1st generation, is a best-in-class **compact radio modem** proven within the market since 2011 and used in thousands of installations.

RipEX2, 2nd generation, was introduced in 2018. This **more powerful standard radio modem** provides significant improvements, especially in terms of data speed, security and number of interfaces.

RipEX-HS, a **fully redundant** 19' hot-standby **master station** with two radios and two power supplies and available for both, RipEX and RipEX2, is the final member of the RipEX family.

All RipEX devices provide a 24/7 reliable service for mission-critical applications like SCADA & Telemetry for Electric and Water Utilities, Oil & Gas distribution and many other applications.

Native IP device

Bridge mode - uses a Transparent protocol on the Radio channel, i.e. packets received on any interface are broadcast to the respective interfaces on all units in the network. Packets received on COM are broadcast to all COM's at all remote sites, allowing you to connect more RTU's to each remote unit.

Router mode - RipEX works as a standard IP Router with all interfaces (Radio and 1-5 Ethernets) and all COM ports without any compromise. Each of the five Ethernet ports on RipEX2 can be configured either as a switch or a router. There is an option of two protocols on the Radio channel: Flexible - unlimited anti-collision meshing without base stations or Base driven where all packet transmissions are managed by the local base station.

- Switch switched or routed Ethernet ports (RipEX2)
- Terminal server Serial-Ethernet converters, 5 independent sessions
- TCP proxy converts TCP to UDP, eliminates transfer of TCP overhead
- ARP proxy any IP address simulating (for RTU's without routing capabilities within the same subnet)
- Subnets unlimited number of virtual Ethernet interfaces (IP aliases)
- Shaping traffic management between Ethernet and Radio interface
- IPsec, GRE, Firewall, DHCP, VLAN, NAPT, QoS...

Long range

- One radio hop over 50 km
- Line of sight not required
- Carrier output power 0.1 10W
- Exceptional data sensitivity
- Any unit can work simultaneously as a repeater
- Unlimited number of repeaters on the way
- Any IP network can interconnect RipEX units

Reliability

- Units tested in a climatic chamber and in real traffic
- Heavy-duty industrial components
- Industrial rugged die-cast aluminium case
- IP40 or IP51
- -40 to +70 °C
- 3 year warranty

Easy to configure and maintain

- Web interface or CLI via SSH
- Wizards fast and simple setup
- Non-intrusive management via USB using either ETH/USB adapter or WiFi/USB adapter with DHCP
- Fast remote access only the effective data are transferred over the air, html page downloaded from the local unit
- External flash disc automatic configuration. SW keys and FW upgrade

Diagnostics & Network Management

- Statistic logs for interfaces and communication links
- Historical and on-line values displayed in graphs
- 20 periods (e.g. days) of history
- Watched values (RSS, Ucc, Temp, PWR, etc.) also from neighbouring units
- SNMP v3 including Traps and Informs
- HW Alarm input. HW Alarm output
- Monitoring Real time/Save-to-file analysis of communication over any of the interfaces

Scalability

SW feature keys

- Advance features only when and where needed
- Router, Speed, COM2 (SFP), 10W, Backup routes, (Duplex),
- Free Master-key trial for 30 days in every RipEX

HW models

- The same HW for Base, Repeater or Remote stations
- Internal GPS module NTP synchronization
- mPCle slot for expansion boards (RipEX2) GPS, 4G/3G/2G, 2x RS232...

SCADA protocols

- SCADA serial protocol addresses are mapped to RipEX addresses
- TCP(UDP) protocols can be handled transparently or using Terminal server or TCP proxy
- Embedded Modbus RTU / Modbus TCP converter
- · Each packet is transferred as an acknowledged unicast

Data speed & Throughput

- Possible Network throughput is achieved by
- Min. Rx/Tx switching and synchronization times
- Optimum Radio protocol for the application Optimization
- payload data and headers compression
 - packet flow optimization on Radio channel
- Different data speeds for individual links
- Auto-speed receiver is automatically adjusted to the data rate of the incoming frame
- ACM and Adaptive FEC (RipEX2)
- Stream mode transmitting starts immediately on the Radio channel, without waiting for the end of the received frame on COM => zero latency
